

Fire Door Drop Tests

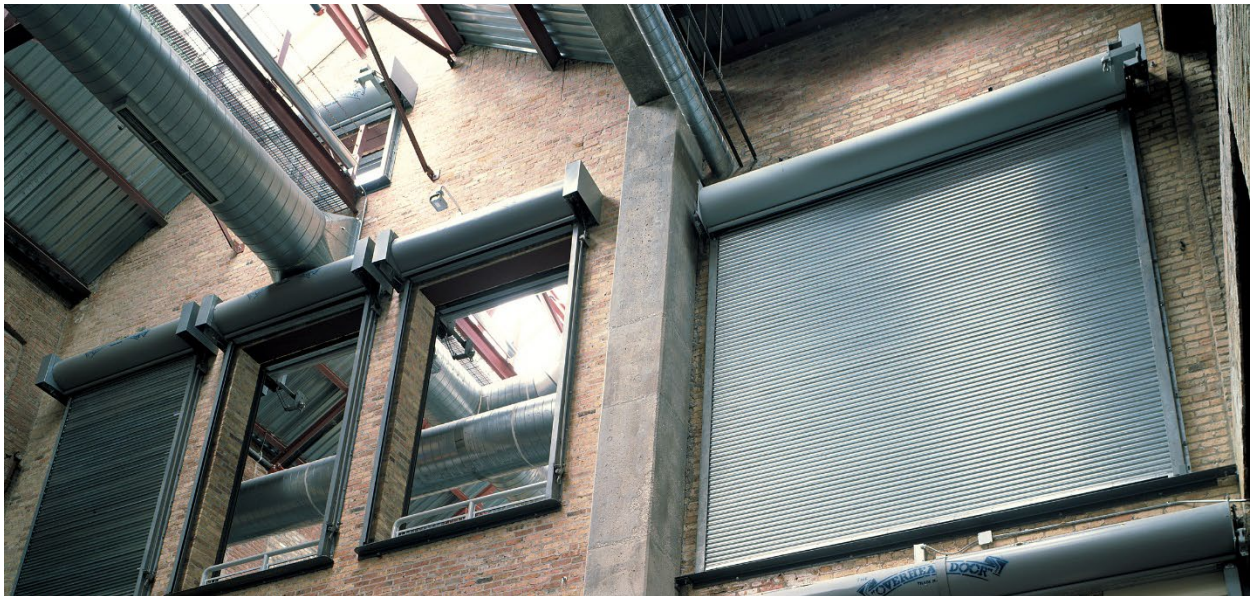

The National Fire Protection Association (NFPA) NFPA-80 standards require building owners and managers to have their rolling and sliding fire doors inspected and drop tested annually and to maintain written documentation of such inspections.

Fire door installation and annual drop testing must be performed by Rolling Steel Fire Door Technicians as certified by the Institute of Door Dealer Education and Accreditation (IDEA). Overhead Door Co. of Grand Rapids has these certified Rolling Steel Fire Door Technicians on staff.

Overhead Door Co. of Grand Rapids inspects and tests hundreds of fire doors annually. We understand how the standards are applied for determining compliance.

Fire Door Drop Tests:

- Inspect guides, hoods, endlocks, slats, release mechanism, and fusible links.
- Test drop for proper operation and full closure.
- Reset release mechanism to factory specifications.
